

# Green Shipping Strategies

Discover essential strategies to reduce Greenhouse Gas Emissions (GHG)

---

## OPTIMIZE MODE SELECTION

Choosing the greenest mode or combining different modes of transportation during a journey will significantly reduce your carbon footprint.

---

## FREIGHT CONSOLIDATION

Consolidate small shipments into one large shipment to maximize capacity utilization, operational efficiency, cost savings, and sustainability goals.

---

## MAXIMIZING CUBE UTILIZATION

When you put more goods into trailers and containers, you can reduce the number of freight runs, resulting in savings and lower emissions.

---

## FUEL EFFICIENCY OPTIMIZATION

Methods such as switching to more fuel-efficient vehicles, optimizing fleet management, and embracing sustainable fuel sources can significantly reduce overall fuel consumption.
